FUSION™

Integrated-Plate Diaphragms

A new kind of power for your pump.

Introducing **FUSION™ Integrated-Plate Diaphragms** from Versa-Matic.

FUSION Diaphragms go beyond bonding PTFE and rubber — they also encapsulate the outer diaphragm plate into the design. This exclusive bonding process results in diaphragms that are **stronger and last longer** than ever before.

FUSION Diaphragms also improve function with a revolutionary concave design that allows the use of a longer shaft on some sizes. No need to sacrifice performance on pumps fitted with PTFE diaphragms.

FUSION Diaphragms can enhance flow rates and suction lift.

Because **FUSION Diaphragms** have no center hole, they **eliminate potential leak paths.**

Put the power of FUSION™ Diaphragms inside your pump:

- Excellent service life
- Inventory cost reduction
- Easy installation and maintenance
- Improved performance
- Greater displacement per cycle
- Eliminated leak paths
- Smooth, sanitary design

FUSION Diaphragms are easy to install and maintain.

Simply spin on the single piece diaphragm and hand tighten — no torque or tools required. The smooth surface of **FUSION Diaphragms** provides for **simple cleaning**, especially beneficial in food-grade and sanitary applications.

Consult your Versa-Matic distributor for availability or more information on our ½", 1", 1½" and 2" FUSION Diaphragms.
